Test Cases for Airline Management System

We are using a test framework that Django provides with a small hierarchy of classes that build on the Python standard unittest library. As the name suggests we are using it for unit testing.

Each Django app consists of Urls, views and models. We check all those for every app.

The Following Functionalities are being tested for each User :

1. Anonymous User:

- **Homepage:**

Input	Expected Output
Selecting Signup, Login options	Goes to requested page
Select help, about options	Goes to those pages without requiring login
Directly trying to access protected urls without logging in	Redirected to login page

All the urls and views are protected you can only see passenger pages if you are logged in as passenger and you can only see manager views if you are logged in as manager, if you are not logged in you can only access the homepage

2. Passenger:

- **Signup :**

Input	Expected Output
Same username	Error message: Username already exists
Missing Details	Error message: Fill the required details
Mismatch in Field Types	Error message: Form is Invalid
All Details Valid	Passenger account is created and redirected to passenger Homepage

- **Login:**

Input	Expected Output
Incorrect username	Error message: Username or password is incorrect
Incorrect Password	Error message: Username or password is incorrect
Correct details	Passenger account is logged in and redirected to passenger Homepage

In the other functions of passengers, while filling the form only possible choices are shown, so there is no scope of error in the details

- **Search flights:**

Input	Expected Output
Missing Details	Error message: Fill the required details
Correct details but Flights are not available	No Flights are shown
Correct details and Flights are available	List Of Flights are shown

- **Book Ticket:**

Input	Expected Output
Missing Details	Error message: Fill the required details
Low Balance	Redirected to Add balance page
Correct details and seat is available	Seat is booked and ticket is displayed
Seat is not available	Error Message: Seat is not available

- **View Upcoming Trips:**

Input	Expected Output
No Tickets booked	No Tickets are shown
Tickets booked	Only tickets with journey date after today are shown

3. Manager:

- **Signup:**

Input	Expected Output
Same username	Error message: Username already exists
Missing Details	Error message: Fill the required details
Mismatch in Field Types	Form is Invalid and you need to fill the form again
All Details Valid	Manager account is created and redirected to manager Homepage

- **Login:**

Input	Expected Output
Incorrect username	Error message: Username or password is incorrect
Incorrect Password	Error message: Username or password is incorrect
Correct details	Manager account is logged in and redirected to manager Homepage

In the other functions of managers, while filling the form only possible choices are shown, so there is no scope of error in the details

- **Check Occupancy:**

Input	Expected Output
Missing Details	Error message: Fill the required details
Correct details	Occupancy is shown for the required route on a day

- **Add Flight:**

Input	Expected Output
Missing Details	Error message: Fill the required details
Mismatch in Field Types	Form is Invalid and you need to fill the form again
Correct Details but schedule is not possible	You are redirected to add flight page again and no flights are added
Correct details	Flight is added on that day from next week for a month and are redirected to homepage

- **Delete Flight**

Input	Expected Output
Missing Details	Error message: Fill the required details
Correct details	Shows all the flights in required route and you can delete them

- **View Profits :**

Input	Expected Output
Missing Details	Error message: Fill the required details
Correct details	Profits are shown for the given time interval

- **Change Prices:**

Input	Expected Output
Missing Details	Error message: Fill the required details
Mismatch in Field Types	Form is Invalid and you need to fill the form again
Correct details	Prices are changed now
